

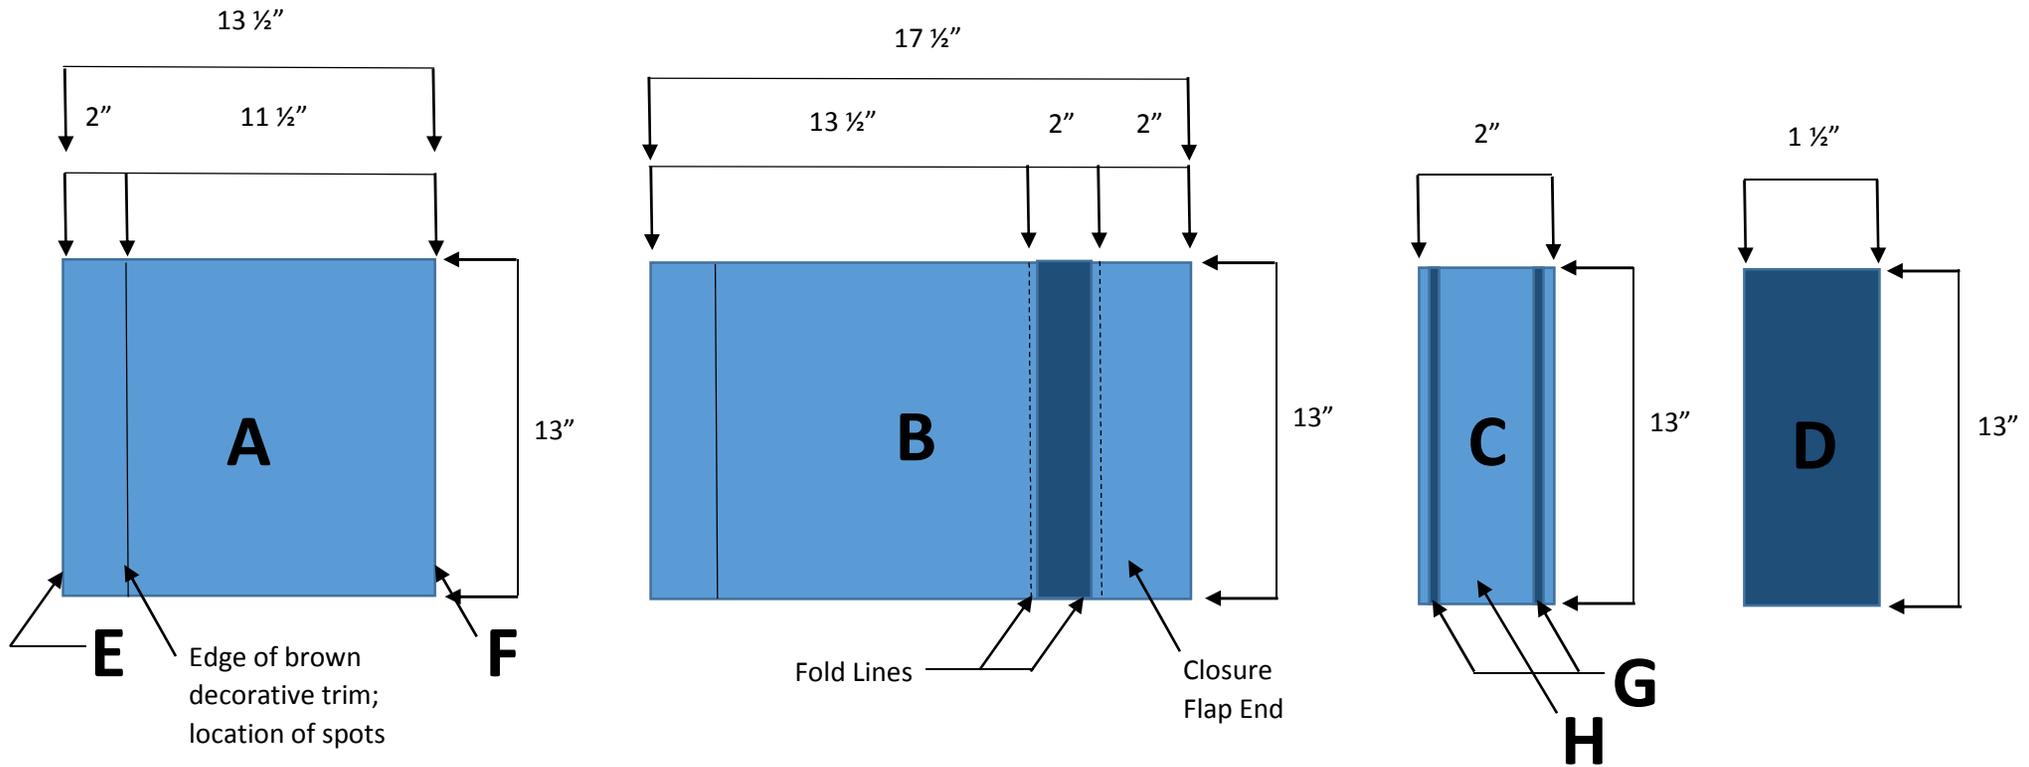

Diagram 1 : Assembled Album Dimensions

Legend and Notes

A = Front Album Panel	Note: Closure flap end of B folds over edge around to top of A at F; approx. overlap of 2".
B = Back Album Panel	Note: I allotted approx. 1/2" extra to spine width to accommodate for folding. (There are two folds; approx. 1/4" extra for each fold.) B is inclusive of the supportive spine and closure flap. Decorative trim same as on A.
C = Postbound Spine	Note: This is a separate piece that connects from the interior out. Diagram 5 shows a complete construction detail of this part. This is an estimated finished width dimension.
D = Supportive Spine	Note: This is NOT a separate piece; it is a section area in between the fold lines on B but its dimensions are important to note.
E = Postbound Spine Location Side	
F = Supportive Spine Location Side	
G = Spine "Legs"	Note: Interior component of C. (I wanted to show this but no measurement is listed since that measurement is determined by the weight/thickness of combine leathers.)
H = Spine "Body"	Note: Interior component of C.
